Comments on the Draft Tuscarora District Plan were collected during 2018 during the public meeting verbally and in writing and also through an on-line survey. Relatively few responses were received. Comments are summarized by subject below.

**Fire:** No comments received.

**Forest Health:** Forest pests were listed as the primary threats in the online survey. There was concern about CWD and questions “What will we do?” DCNR is actively involved with PGC and Dept of Agriculture in efforts to reduce CWD and limit the spread. The Bureau of Forestry is cooperating with efforts to have deer tested and reduce the overall deer density.

**Timber and Forest Products:** In the online survey this subject was listed by respondents as both a threat and a value. The public also learns from what we do on State Forest land.

**Recreation and associated Infrastructure:** Hunting, fishing and wildlife viewing were listed as primary uses. One commenter requested more user-friendly trails, by which we assume they are suggesting more handicapped accessible trails, or easier trails. One comment was not to build more infrastructure until vandalism is under control. One commenter values peace and solitude offered by the Tuscarora.

The District will have to carefully balance the needs for development of infrastructure and maintenance of wild character.

**Plants, Wildlife and Habitat:** This was listed as a primary use and value in the online survey. There was one suggestion to add “Deer Hunting” to the District plan goals.

**Communication and Outreach:** There were general comments for more information especially site-specific information with signage. Also, a suggestion to improve the website. Facebook was the best source of information. Maps and printed guides were done well.

**Oil, Gas and Minerals:** Listed as a threat in the online survey. No specific comments.
