LITTLE BUFFALO STATE PARK

Find Little Buffalo State Park just 2 miles south of Newport, PA 522.

HISTORY

It is unknown why the wilderness called Little Buffalo Creek or the adjacent ridge called Little Buffalo Hill had the local Indian name that buffalo also called, bulked in the area.

Leaving the forest behind, Little Buffalo State Park is marked by many historic Indian tribes and nations for several centuries. This is because the area contained a wealth of excellent material for the making of tools and weapons. Little Buffalo State Park is surrounded by a wealth of resources that have provided for generations.

There are many opportunities to use wildlife, but please observe from a safe distance and do not feed wildlife.

Little Buffalo Creek Trail offers good opportunities for seeing waterfowl. The trails of boater, hiker, and angler can be found in the area. The Middle Ridge Trail is a good trail for seeing wildlife. The area has large populations of Allegheny mound ants. Hale Hill provides habitat for many birds, including green herons, osprey, and hawks. The rest of the lake is a good place to see wood ducks. Although some residents, bold ducks, and semis have often seen near Holman Lake. Many waterfowl use the lake as a rest stop during migration, including Canada goose, mallard, blue-winged teal, muscovy ducks, and ring-necked ducks.

Many species of wildlife inhabit the forests of the park. Common yellowthroat, white-throated sparrows and blue-gray gnatcatchers are common. The blue-winged teal can be seen by the power house along Millrace Trail and the east side of the lake.

Next best areas are surveyed throughout the year, but the best place to see common loons is in the Holman Lake. Please enjoy the nature trails, but do not disturb the next areas.

**Geology**

More of the Little Buffalo Valley is underlain by diabase rock, which is the base of the bottom half of the park. Even though Little Buffalo State Park has reported rock and sand for the area, Holman Lake is full of little and is an excellent fishing. The terrain structure shows the depth of the water which helps support a great amount of life in the lake and the lake's wildlife.
