The image contains a geological map of Pennsylvania with various geological strata and formations labeled. The map includes a legend explaining the different geological periods and types of rock formations present in the state. The map is based on the geological survey by the Department of Conservation and Natural Resources, Bureau of Topographic and Geologic Survey.

The text in the image explains the geological strata and formations, including the Quaternary, Tertiary, Jurassic and Triassic, Permian, Mississippian, Devonian, Silurian, Ordovician, and Cambrian periods. The map shows the distribution of different rock types such as sandstone, limestone, and conglomerate across the state.

Cretaceous rocks, which are present in small areas of southern Montgomery County, cannot be shown at the scale of this map. The map is designed to provide a detailed understanding of the geological history and composition of Pennsylvania.

*Quaternary rocks, which are present in small areas of southern Montgomery County, cannot be shown at the scale of this map.
